Lishuang Huang

Current Address:

B6, 28-30, Mannheim, Germany, 68161 Department of Economics, University of Mannheim

E-mail: lishuanghuangecon@gmail.com

Education

Visiting Ph.D. student, University of Mannheim Mannheim, Germany.

Nov. 2023 - Present

Web: lishuanghuang.com

Ph.D. candidate in Economics, Jinan University Guangzhou, China.

Sept. 2021 - Present

M.S. in Taxation, Jinan University Guangzhou, China.

Sept. 2017 - June 2019

B.S. in Management, Guangdong University of Finance Guangzhou, China.

Sept. 2013 - June 2017

Previous Employment

Lecturer, Department of Accounting, Guangzhou College of Commerce

June 2019 - Sept. 2021

Research Inerest

Taxation, Labor Economics, Development Economics.

Working Papers

2023 Training for Hukou: Evidence from China (with Shimeng Liu and Wenquan Liang)[PDF]

Based on the China Labor-Force Dynamics Survey(CLDS), we find that the participation rate in training has significantly increased after the 2014 hukou reform. The higher the hukou requirements, the larger the participation rate of migrants, with training funds more likely to be self-financed. This phenomenon is attributed to getting bonus points related to the hukou system through training. Besides, migrants with less than a bachelor's degree or less than 40 years old are more likely to train. Training for hukou can improve individual income. However, the income increment for migrants is 62.08% less than the natives, coupled with a low skill match. Despite these skill mismatches and less favorable spillover effects, training facilitates the social integration of migrants into their cities of residence.

2024 Tax Incentives and Labor Market Power: Evidence from China's Value-added Tax Reform [PDF]

Using China's manufacturing firm-level data from 1998 to 2007, I measure labor market distortion as the ratio between a firm'smarginal revenue product of labor (MRPL) and wages. Most manufacturing firms operate in a monopsonistic environment, with an average markdown of 2.30, meaning workers earn only 43.47% of their marginal income. Using a difference-in-differences (DID) approach, this paper finds that the 2004 VAT reform increased labor market distortions, particularly in high-productivity, capital- intensive, and older firms, where workers received a smaller share of MRPL.

Publications

2019 Growth of Tax Revenue in Macao since the Return of 1999, Sub National Fiscal Research. (In Chinese), with Manman Hu [PDF] [Summary(English)]
